sit vs Subversion

Comandos basicos de Git

Archivo PDirectorio Git + committed.

Archivo con git add + staged.

Archivo sin git add 7 4600 ficado

- 1. Set the name and email for Git to use when you
- \$ git config --global user.name "Bugs Bunny" \$ git config --global user.email bugs@gmail.com
- You can call git config -list to verify these are set.
 These will be set globally for all Git projects you work with.
- You can also set variables on a project-only basis by not using the --global flag.
- You can also set the editor that is used for writing commit messages:
 S git config --global core.editor vim (it is v; by default)

| command | description |
|---------------------|---|
| git clone url [dir] | copy a git repository so you can add to it |
| git add files | adds file contents to the staging area |
| git commit | records a snapshot of the staging area |
| git status | view the status of your files in the workin directory and staging area |
| git diff | shows diff of what is staged and what is modified but unstaged |
| git help [command] | get help info about a particular command |
| git pull | fetch from a remote repo and try to merg into the current branch |
| git push | push your new branches and data to a remote repository |

git treet HEAD -- filename a combos antos amuit ogé Checusout -- filename a sin modif. un archino wodif.

on status [-s]

sit cult - mine to hadif is to staged (add).

sit cult -- cached - do cambias staged (add)
